For more information about the flow element, please refer to the Application Note. You can find it in the section on differential pressure sensors in the download center:

www.sensirion.com/dp-download

Important note

The SDP evaluation kit does not contain the SEK-SensorBridge required for a plug-and-play connection between the sensor and a PC. It needs to be ordered separately on our website.

The Evaluation Kit is designed for use with the SDP31. It cannot be operated with other SDP3x sensors.
